

Silver Surfer Herbal Vaporizer: Product Guide

Product Summary:

Why Silver Surfer?

Very easy, because it is made of the highest quality parts available! The housing is solid aluminum so you don't have to worry about a fire hazard. The housing goes through a painstaking process of cutting, drilling, grinding, filling, sanding, sand blasting and then it's anodized to get a nice finish. We use only the highest quality ceramic heater on the market. The temperature is fully adjustable. On top of that you get a 3-year warranty giving you the peace of mind. In addition, you get a company that has been in the vaporizer business for almost 6 years! To make a perfect seal every Hands Free Silver Surfer unit uses a ground glass joint also giving the user the hands free experience.

The Silver Surfer Herbal Vaporizer comes with:

- Silver Surfer 120v unit. (220v units available from manufacturer)
- FREE hand made glass marble pick
- Standard Whip or Ground Glass Whip, depending on model purchased. (includes standard PYREX quick change wand and food grade vinyl tube)
- FREE Hemp Storage Bag. This bag is nice, and very well padded.
- 3 FREE screens for your wand!
- Instruction manual and 3 year warranty! With Life Time Warranty on Labor!

How It Works:

The Basic Heating Process

The Silver Surfer Herbal Vaporizer is like no other vaporizer on the market. The Silver Surfer Herbal Vaporizer is the only vaporizer to use an all glass and ceramic heater.

Untainted air is inhaled through a small hole in the glass heater at arrow 1.

The herbal vaporizer heats the air up to vaporizing temperature around arrow 2.

Hot air passes through the SSV's glass heater and into the glass wand at arrow 3.

Now the air that you are inhaling is hot enough to vaporize your favorite smoking tobacco which is in the wand. You can change how hot the air is by inhaling faster or slower. The slower you inhale the longer the air is in the glass heater, so therefore the air gets hotter. If inhaling slower still does not get the air hot enough turn the SSV up a little more. Many other wand-style herbal vaporizers currently on the market have intake air that passes by all the electrical wires and connections inside the unit. The Silver Surfer Herbal Vaporizer is also the only vaporizer to have all the hot metal eliminated from the path of the air you are inhaling to offer the cleanest vaporization possible. Note: The vapor is cool enough that it does not heat up the stainless steel screen enough for the screen to emit any metal fumes.get the screen hot enough to give off any metal fumes.

How to Vaporize

1. Turn on SSV unit using option A or B below.
 1. First one can turn glass marble adjustment knob to full blast for about 2-3 minutes. Then turn the glass marble dial back down to approximately 2/3 of the way (1pm on a clock face). Most herbs for aromatherapy and homeopathic healing only need the SSV turned up 2/3.
 2. The other way to turn the unit on is to just turn it to your favorite position (you will find this position after use) and wait 3-5 minutes. Either way the unit is very simple to turn on.
2. While the SSV unit is heating up grind or chop up your herbs (preferably with a herb grinder). Put a little amount of the ground herb in the wand, being careful not to pack the herb in the wand tightly. The wand should only be filled from 1/8"-1/4" of tobacco. When you are vaporizing remember less is more.
 1. To put the ground herb in the wand you can put it in with your fingers, or suck it up off of a table or dish (known as the Vacuum Method).
3. Place the wand up to the heater were the hole is. There is a nice fit when the two piece of glass come together. When the two pieces of glass come together, begin to inhale. This will draw air into the heater and warm it up to vaporizing temperatures. The air passes the plant matter and warming it until vaporization occurs. You can stir your plant material in between vapor draws to increase the efficiency of the vaporization. The vapor is a light white cloud. To empty the wand turn upside down and empty into the trash. You can blow through the mouth piece to get the plant matter out easier.
4. Enjoy. It's not too hard to go from smoking to vaporizing! A much better alternative!

Product Components

Ceramic Heater and all Glass!

Da Buddha features a very uniquely designed heater. We have been able to keep our ceramic heater separated from the all the other parts. Our intake air passes only by glass and ceramic.

What makes our heating element so unique?

The ceramic part of the heater is what sets this unit apart from all the competitors out there. Da Buddhas' ceramic heater is top of the line quality. No expense has been taken in effort to provide the customer with the best product on the market. A ceramic heating element is great because ceramic gives off no toxins at all. Ceramic possesses the same quality as glass as it doesn't emit any toxins when heated to very high temperatures unlike metal.

Changing the Screen!

This wand is a thing of beauty! The hour glass shape is designed to stop the screen from going all the way through. Only 7th Floor offers this design!

How to change the screen on your vaporizer wand!

Well, this screen change is very easy with our patented quick change wand. First take out the old screen. Now take your new screen and put it in the top. Take your stir tool and push it down. Now, you would like to push the screen down and have it slide over but this is difficult. What you do is when the screen is down towards the beginning of the hour glass, FLIP the screen. This FLIP of the screen will make one edge catch in the lip and then all you have to do is push the other end down with the stir tool. You should be able to put in a new screen almost faster and easier than taking the screen out from the front. The process of putting in a new screen is FAST!
